

100um x 10um Pit R=1.3925" 500ips

2
5 μ s
0.50 V

Antigravitational
signal is 2.1uSec
propogation
delayed

Electromagnetic
signals from pit
defects edges

The maximum time period of the non-renormalizability of anti-gravity is 2.1uSec propogation delay + 19.9uSec renormalization delay for a total period of 22uSec or 45.454KHz
